EASYWURLD — NOVEMBER 2026

Open this first. You do not need any code tool for anything in here.

Where the month is

In this same folder you downloaded, open **NOVEMBER_DELIVERY**. Inside it are thirty folders: Day_01 to Day_30. Everything else in this download is the studio's working code — ignore it completely.

How to work a day

1. Open the day folder (Day_02 is Tuesday 3 November, and so on).
2. Open **00_POST_NOW.pdf** — it opens like any document, on phone or computer.
3. Work top to bottom. Each block is one post: copy the caption in the shaded box, attach the files it lists (they sit in that day's assets/ folder, already in posting order), set the time, set the AI label.
4. If a block's video is not ready yet, the day's sheet says "POSTER ONLY — hold this slot"; post the rest and come back when the folder is updated.

What the file names mean

assets/ files are named HHMM_POSTID_position-of-total. 0700_…_3of5.jpg is the 07:00 post, slide 3 of 5 — attach in that numbered order. Videos are single .mp4 files: upload as they are.

Nothing publishes itself. Every post stays Draft until you schedule it.
