How to use this day pack

What is in this pack

One zip = one day = everything you post that day. Nothing publishes itself; every row stays Draft until you schedule it.

1. Open 00_DAY_SHEET.md first

It lists all 46 placements in time order: what posts, where, at what time, which file to attach, which caption to paste, and whether the platform AI label goes on.

2. File names already carry the order

Every file in assets/ is named HHMM_POSTID_position-of-total. 0700_..._3of5.jpg is the 07:00 post, slide 3 of 5. Sort the folder by name and it is in posting order.

3. Carousels: attach in the numbered order

Select the file ending _1of5 first, then _2of5, and so on. Instagram, TikTok photo posts and Facebook keep the order you select them in. 04_CAROUSELS.md says what each slide is for.

4. Check the arrangement with your eyes

The pages after this one show every carousel and story as numbered thumbnails, side by side. If the numbers read 1, 2, 3, 4, 5 you are right.

5. Stories and videos

Stories are three frames, _1of3 then _2of3 then _3of3. Videos are one MP4 each: upload as is, no editing.

6. Before any video slot

Read the Video status section at the bottom of the day sheet. If a slot says POSTER ONLY - hold this slot, skip it today; the day is re-uploaded when its video lands.

7. LinkedIn

01_LINKEDIN.md holds the seven posts: four on the company page, three on the personal profile. Paste the body exactly, then post the first comment. Links go in the first comment only.
