Image Sizes and Safe Zones

Where each image goes, and the banner

Image Sizes, Safe Zones and the Banner

Social apps cover parts of an image with buttons, names and captions. If your words sit under those, people cannot read them. This page tells you which size to use, where, and how the Easywurld images stay inside the safe area.

> CHECK ONCE ON YOUR OWN PHONE
>
> Apps change their layouts from time to time. After you post the first image of each type, look at it on your phone. If anything is hidden, tell me which image and I will move the text.

What each image is and where to use it

Image	Size in pixels	Where to use it
Feed post and carousel slide	1080 x 1350	Instagram feed, Facebook feed, WhatsApp Status (it fits), LinkedIn image
Story, Status and video	1080 x 1920	Instagram Story and Reel, Facebook Story, WhatsApp Status
Banner	1200 x 630	Facebook or LinkedIn post, a seller page cover (Selar and similar), an email header, or when you share a link
Facebook cover	1640 x 624	The wide picture at the top of your Facebook page
LinkedIn cover	1584 x 396	The wide picture at the top of your LinkedIn profile
WhatsApp Business photo	640 x 640	Your WhatsApp Business profile picture (shows as a circle)

Where the banner is used (simple answer)

The banner is the wide picture. Use it when an app wants a wide image rather than a tall one: a Facebook or LinkedIn post, the cover of your seller page, or the top of an email. For Instagram and WhatsApp Status, use the tall posts and stories instead.

The safe zones we used

Type	Rule we followed
Feed posts and slides	Everything is at least 75 pixels from every edge. Instagram's profile grid trims about 34 pixels from each side of a 4:5 post, and nothing important is there
Square mockup image	We placed it on a 1080 x 1350 canvas so the grid never cuts it
Stories, Status and Reels	Nothing important in the top 250 pixels (name and progress bar) or the bottom 340 pixels (reply bar and buttons)
Reels and short videos	The right-hand 140 pixels are kept clear for the like and share buttons
Facebook cover	Text is inside the centre of the picture, because phones crop the sides
LinkedIn cover	Text sits to the right, because your profile photo covers the lower left
WhatsApp Business photo	The logo sits in the middle, so the circle crop does not cut it

How to check an image yourself

1. Post it once to Close Friends on Instagram, or as a WhatsApp Status only you can see.
2. Open it on your phone.
3. Can you read every word? If yes, it is safe.

Changes made in this version

The Stories, the videos and the square mockup images were redrawn to follow these safe zones. The feed posts and carousel slides were already inside them.
