What Selar takes, and what actually lands in your account.

Naira sales cost 4%, plus a flat ₦50 per sale.
Everything below is calculated on that, nothing else.

Figures are your net after Selar's fee. Bank payouts on Naira sales land in about one day.

THE ARITHMETIC

Every price on your list, after the fee

Selar charges 4% + ₦50 on each successful Naira sale and pays out to your Nigerian bank account in about a day. There are no listing fees and no monthly fee on the free plan. The table below is what is actually left.

Product	List price	Selar fee	Effective	You receive
Any one of the nine packs	₦5,000	₦250	5.0%	**₦4,750**
All nine packs (bundle)	₦25,000	₦1,050	4.2%	**₦23,950**
Landing page, built	₦150,000	₦6,050	4.0%	**₦143,950**
Business website, 5 pages	₦300,000	₦12,050	4.0%	**₦287,950**
Website + SEO	₦450,000	₦18,050	4.0%	**₦431,950**
E-commerce build	₦650,000	₦26,050	4.0%	**₦623,950**
Monthly care	₦25,000	₦1,050	4.2%	**₦23,950**

THE ONE NUMBER THAT MATTERS

₦5,000 in, ₦4,750 out — every time

That ₦250 is five per cent, and at this price it is the most expensive five per cent in the business. The fee is a percentage plus a flat ₦50, so the smaller the sale, the heavier the flat part: ₦50 is 1% of a ₦5,000 sale, but only 0.03% of a ₦150,000 build. Every pack carries that weight separately.

You sell	Selar keeps	You keep	As a share
1 pack at ₦5,000	₦250	**₦4,750**	95.0%
40 packs in a month	₦10,000	**₦190,000**	95.0%
1 landing page at ₦150,000	₦6,050	**₦143,950**	96.0%
1 website at ₦300,000	₦12,050	**₦287,950**	96.0%

This is the strongest argument for the bundle: at ₦25,000 the fee drops from 5.0% to 4.2%, and the buyer gets nine things for the price of five. It is also why every pack can be sold alone — ₦250 of fee will not break a ₦5,000 product.

THE SETUP

Four settings, set once

Selar is free to start and takes its cut per sale, so the only real decision is who absorbs the ₦50. Here is the version that keeps your prices clean.

1 · Turn on “buyer pays the fee”

In Selar, each product has a fee setting. Set it so the buyer covers the ₦50. Your ₦5,000 stays ₦5,000 on the page, and ₦4,750 still lands if you instead absorb it. With it on, you keep the full ₦5,000 minus the 4%.

2 · Do not chase the round number

To net exactly ₦5,000 with the fee absorbed, list at ₦5,263. That is an ugly price for a ₦53 difference. Leave it at ₦5,000 and let the buyer pay the ₦50.

3 · Put the price in the product title

“The Chat-to-Customer Playbook — ₦5,000”. It kills the “how much?” DM and it makes the free traffic from your posts convert on its own at night.

4 · One product per pack, not a bundle

Nine separate products. The bundle is an upgrade inside each listing's description, not a separate shop. It keeps delivery simple: one file, one price, one keyword.

THE RULE

Never quote ₦5,000 and deliver ₦4,750 of expectation

The fee is not a reason to raise your price, and it is definitely not a reason to apologise. It is a cost of collecting money, like transport to the bank. Your price is ₦5,000 because the playbook saves a seller an afternoon of lost enquiries. The ₦250 is Selar's, not yours, and it appears on the receipt.

WHAT THIS CHANGES IN PRACTICE

Scenario	Sales / month	Gross	You net
Quiet month	10	₦50,000	**₦47,500**
Working month	30	₦150,000	**₦142,500**
Good month, +1 build	30 + 1 page	₦300,000	**₦286,450**
Bundle x 20	20	₦500,000	**₦479,000**

Net figures: 96% of gross, minus ₦50 per transaction. Bundle rows assume the buyer pays the fee.
